

Capability & Experience

*In Sustainable Development
Advisory Services*

OVERVIEW

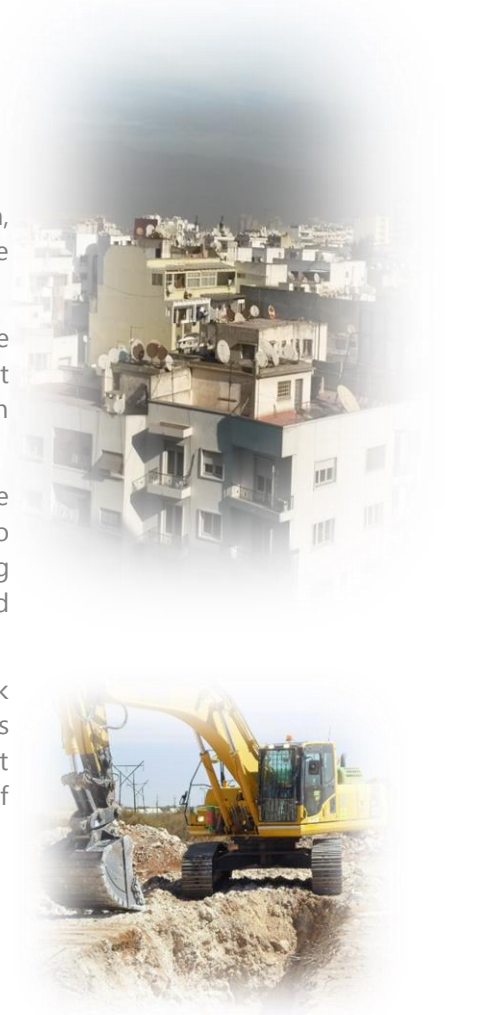

Sustainable development, underpinned by its three pillars of economic growth, social justice and environmental stewardship, has been rapidly integrated into the architecture of every successful business.

From early sustainable development interventions in the mid-1990s to the more recent commitments reached at COP21 and the UN Post-2015 Development Agenda, the ABS Africa team of professionals are privileged to be involved in advising clients on a range of sustainability aspects specific to their business.

We understand the complexity of environmental and social systems and the significant role these play in the long-term sustainability of a business. We also understand that our clients need flexible, business-specific strategies for meeting their sustainability commitments. Our advisory services and solutions are developed in partnership with our clients to meet their unique requirements.

With sustainability being a broad and complex field, we have established a network of selected specialist expertise and in-country sustainability professionals across Africa to complement our team. Through this network, we are able to ensure that our personal service, quality and value proposition remains consistent, regardless of where we work.

ABS Africa is a member of the Green Building Council of South Africa (GBCSA).

SERVICES
